Aim

This course is for candidates to gain an understanding of the practical skills and knowledge required to:

- Identify safe working techniques
- Identify a range of lv and hv joints
- Identify common cables including High Voltage Cables
- Understand terminology used in the cable jointing industry
- Be aware of Electrical Testing and why it is important

Participants

Individuals or client nominated persons who are required or wish to understand more about Cable Jointing activities and materials

This course is perfect for supervisory, auditors and administration team members to understand what the Cable Jointer does and how they do it, and to enable observations to be made on the requirements for safe and effective testing of service terminations.

Certification

Candidates will not be assessed as this is an appreciation course
