

Safe Handling of Oil for Operatives

Course Code: OIL1

Introduction

This course is to ensure your operatives know what they should do before and after handling switchgear that contains oil.

The course will raise the awareness of safe lifting of apparatus and plant so no poor practices are used when loading and unloading i.e. unbalanced loads

Operatives will also understand precautions for their safety from contamination or to prevent them contaminating clean oil.

Content

- * Safe handling of oil
- * Leaks and Spillage management
- * Use of emergency spillage kits
- * Removal / Moving of equipment containing oil

Aim

To ensure the candidates understand precautions to take when transporting and working with apparatus and plant that contains oil.

Participants

Any person who supervises or handles oil filled plant and apparatus, moves or transports oil or other fluids.

Certification

A Certificate of Competence will be issued to candidates who successfully complete the course assessment
